

MAT 220 Refresher

Content

Chapter 0: Preview and Review

- 0.1 Preview of Calculus Two Basic Problems: slope of a tangent line and area of a shape A Unifying Process: Limits Differentiation and Integration Extensions of the Main Ideas
- 0.2 Lines in the Plane Real Number Line
- 0.3 Functions and Their Graphs
- 0.4 Combinations of Functions Multiline Definitions of Functions Composition of Functions, stretching and shifting, iteration of functions
- 0.5 Mathematical Language

Chapter 1: Functions, Graphs, Limits and Continuity

- 1.0 Tangent Lines, Velocities, Growth Slope of a tangent line
Falling tomato Growing bacteria
- 1.2 The Limit of a Function the Idea, Informally
- 1.3 Continuous Functions Definition and Meaning
- 1.4 Definition of Limit Intuitive approach

Chapter 2: Derivatives

- 2.0 Introduction to Derivatives Preview of Chapter 2 Slopes of Tangent Lines: Graphically
- 2.1 The Definition of the Derivative Definition, notations
- 2.3 $D(f^n)$ Derivatives of Trigonometric and Exponential Functions Higher Derivatives: Derivatives of Derivatives
- 2.4 The Chain Rule
- 2.5 Some Applications of the Chain

- 2.6 Related Rates: An Application of Derivatives the Derivative as a Rate of Change
- 2.7 Newton's Method
- 2.8 Linear Approximation and Differentials

Chapter 3: Derivatives and Graphs

- 3.1 Finding Maximums and Minimums
- 3.2 The Mean Value Theorem and Its Consequences Rolle's Theorem The Mean Value Theorem Some Consequences of The Mean Value Theorem
- 3.3 The First Derivative and the Shape of f vocabulary and two shape theorems Using the Derivative to Test for Extremes
- 3.4 Second Derivative and Concavity
- 3.5 Applied Maximum and Minimum Problems
- 3.6 Infinite Limits and Asymptotes Limits as x approaches
- 3.7 L'Hopital's and Other Indeterminate forms

Chapter 4: The Integral

- 4.0 Introduction
- 4.1 Sigma Notation and Riemann Sums
- 4.2 The Definite Integral
- 4.3 Properties of the Definite Integral
- 4.4 Areas, Integrals and Antiderivatives
- 4.5 The Fundamental Theorem of Calculus
- 4.6 Finding Antiderivatives
- 4.7 Applications of Definite Integrals
- 4.8 Using Tables to Find Antiderivatives
- 4.9 Approximating Definite Integral
