

LGS 115

Global Supply Operations

This course provides a comprehensive overview of modern global supply chain operations, including procurement, inventory management, logistics, transportation, customer service, quality management, and performance measurement. Students will explore supply chain analytics, ethical decision-making, and stakeholder relationships within today's evolving global business environment. The course also includes a field experience component that provides hands-on learning through industry engagement, company analysis, logistics site visits, and career development activities.

COST: \$315
